Smith argues that the deregulation of the financial industry, the privatization of public services, and the erosion of labor unions have all contributed to the creation of a system that is rigged in favor of the wealthy and powerful.

As a result of these policies, the gap between the rich and the poor has widened, and the middle class has been shrinking. This has led to a decline in consumer demand, which has in turn caused a slowdown in economic growth.

Smith also argues that America's free market policies have led to a decline in environmental protection. The deregulation of the energy industry has led to increased pollution and climate change. The privatization of water resources has led to water shortages and contamination.

The result of all of these factors is a world economy that is on the brink of collapse. Smith warns that if we do not change course, we will face a global economic crisis that will be worse than the Great Depression.

America, Free Markets, and the Sinking of the World Economy is a must-read for anyone who wants to understand the real causes of the world economic crisis. It is a powerful indictment of the free market policies that have led to the decline of the middle class and the environment.
