Print length : 534 pages

## The definitive guide to mathematical and statistical methods used in actuarial sciences and finance

In today's rapidly evolving financial landscape, it is more important than ever to have a strong foundation in mathematical and statistical methods. This book provides a comprehensive overview of the essential techniques used in actuarial sciences and finance, equipping readers with the knowledge and skills they need to succeed in this highly competitive field.

Covering a wide range of topics, from basic probability and statistics to advanced topics such as risk management and investment analysis, this book is a valuable resource for both students and practitioners. The authors have drawn on their extensive experience in the field to provide a clear and concise explanation of each concept, supported by numerous examples and exercises.

## Key Features

- **Comprehensive coverage** of mathematical and statistical methods used in actuarial sciences and finance
- **Clear and concise explanations** of each concept, supported by numerous examples and exercises
- **Written by experienced authors** who have worked in the field for many years
- **Ideal for students and practitioners** alike

## Table of Contents

- 1.
2. **Basic Probability**
3. **Statistical Inference**
4. **Time Series Analysis**
5. **Risk Management**
6. **Investment Analysis**
7. **Appendix**

## Author Biographies

**Dr. John Smith** is a professor of actuarial science at the University of California, Berkeley. He has over 20 years of experience in the field, and has published extensively in top academic journals. He is a Fellow of the Society of Actuaries and a Chartered Financial Analyst.

**Dr. Jane Doe** is a senior vice president at a global investment bank. She has over 15 years of experience in the field, specializing in risk management and investment analysis. She is a Fellow of the Society of Actuaries and a Chartered Financial Analyst.
